Properties for Display User

To set properties, right click on the Display User Wizard, left click on Properties. Click on the behavior tab. Properties should be set as shown below. Those that don’t display (Selection lists, Folders, Orders Tab, and Suspension Tab) should all be set to display None since these are not used by Access Services.
Left click on the helpers tab. Click on User search, then click on the Search Index pull down list and choose your preferred search index. Be sure to have the Start with search helper box checked. This will allow you to choose how you want to search, i.e. NAME, ALT ID, EMAIL. If you do not check off this helper, you will only be able to search by User ID. Choosing NAME as the default is good option.
