UMDNJ Integration Project

We have built a project template for the RUL UMDNJ Integration team to record activities related to this project. Activities are stored in a task table and each main activity is broken down into sub-tasks. Documents related to tasks are uploaded and are stored in the table.

The project manager or the team member can update the status of the completed task. The green check indicates the task is completed; the yellow square indicates the task is in-progress.
Digital Projects

The Digital Project Coordinator at SCC has been using Intellect to record digital projects. All information related to digital projects, including but not limited to, project manager, project team members, project start date, and project end date are entered in a form and the information is stored in a table.

A workflow has also been associated with the digital projects to move the work forward effectively. As the work moves forward, the activities are shaded in different colors; completed activities are shaded in green, overdue tasks are shaded in red, and tasks not yet started are shown in white.
Yearbook Project

The Yearbook Project began in late 2010 for the purpose of digitizing the University's collection of yearbooks in an effort to preserve and promote access. Yearbooks are scanned, ingested into the RUcore repository, and presented to the public through a custom webpage. Project notes and documents are stored in separate tables for each yearbook.

This project uses a workflow to move the work forward. To this date, the following yearbooks have been digitized and are in RUcore: 1871, 1872, 1874, 1875, 1877, 1888, 1889, 1890, 1950, 1951, 1952, and 1962.
