"New Jersey: State of Invention" was a one day conference featuring noted speakers reflecting on numerous perspectives on inventiveness within the Garden State. A wide variety of speakers gave presentations, from both within and outside the University. The featured speaker was Princess Elettra Marconi Giovannelli, daughter of the famed 20th century Italian scientist and radio inventor Guglielmo Marconi who established branches of his wireless telegraph company in Wall Township and Franklin Township in the early 1900's and conducted experiments in 1899 in the Navesink Highlands. The formal program was followed by a reception featuring Jersey cuisine.

Outreach: Engaging New Jersey Residents
- InfoAge Science History Center
- New Jersey Antique Radio Club
- IEEE History Center
- NJDH
- Citizen Historians
- General Public

Collaboration: Working Across Disciplines
- Department of Classics – Rutgers
- Edison Papers – Rutgers
- Institute of Electrical and Electronics Engineers
- Solidia Technologies
- New Jersey State Library
